Native Plant Garden Plant List

Select plants for your garden using the Museum's garden as a living field guide. The Museum features Monterey County's native plants in five unique spaces: chaparral, coastal sage scrub, oak woodlands, a butterfly garden, and an ethnobotanical area with plants that California Indians used in daily life.

Planting natives helps preserve biodiversity, pollinator habitat, and a sense of place. Plan for seeds, berries, and flowers to have a garden alive with birds and butterflies. Local species are well-adapted to the local climate and the right selection for your space helps grow a beautiful, drought-tolerant, low-maintenance landscape.
